Question text

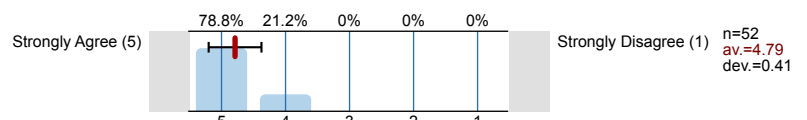

1. My tutor...

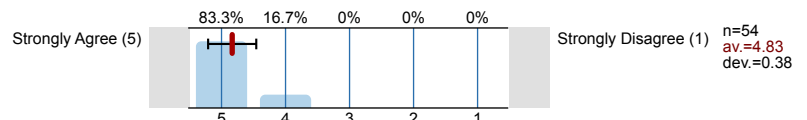

1.1) ...was well prepared.

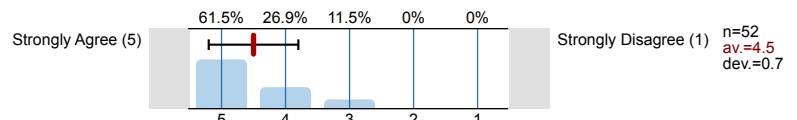

1.2) ...communicated clearly (in person or online).

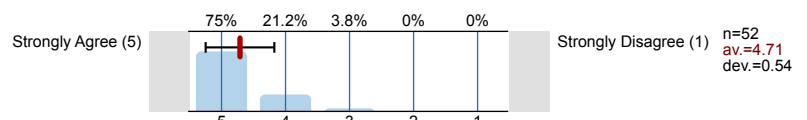

1.3) ...was approachable and treated students with respect (in person or online).

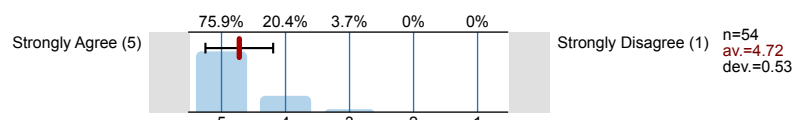

1.4) ...inspired me to learn.

1.5) ...encouraged student input (in person or online).

1.6) ...gave helpful personal or group advice or feedback (in person or online).

1.7) Overall, how would you rate this tutor?
5= Outstanding | 3=Neutral | 1=Very Poor

Comments Report

1. My tutor...

1.8) What aspects of this tutor's approach to teaching best helped your learning?

- - he asked simpler questions and got us to answer them -> built to the question we had for him (made it very easy to understand since it was step by step and by him asking more basic questions it made sure we understood everything from the start.
- also spoke slowly and calm
- Always encouraged questions and was very patient with answering 'dumb questions'. Took extra time out of his day to help me with coding.
- Answering questions in very simple terms
- Approachable and friendly.
- Clear explanations helped with understanding.
- doesn't waffle on, concise, not boring
- encouraged student input and answered questions well
- Engaging, good at explaining concepts and approachable. Excellent tutor
- Excellent tutor - would recommend.
- Explained the questions in detail and ensured we understood before moving on.
- Explained things in a way that was easy to understand, nothing to fault.
- He always gave hints instead of outrightly telling the answer, which was good as it forced me to think deeper. he was good at giving clear prompts in the right direction.
- He is very patient and calm in teaching, and his friendly personality makes me easy to ask questions. Also, he has no ups and downs in his works, hence very professional. He has the ability to make every explanation easy and very open to second or further questions if needed. Despite many students here, he has fair amount of conversation with every student who has questions. I really liked him and wish him to be a tutor for any subjects I would take in the future!
- He knew everything very well and could clearly explain it to students and encourage them to work a lot during the prac.
- He made concepts very clear to me so I understood everything that was taught in the course
- He tried to explain from point A to B very well so that was nice and refreshing
- he was always willing to help when I didn't understand how to complete a problem and he helped in a way that I would be able to guide myself to the answer rather than just telling me what to do.
- He was very good at checking whether or not you needed assistance.
- I really appreciated how much Ryan seemed to care about what he was teaching and how we all understood it. He could explain python particularly well for someone who knew nothing about it
- overall good lad
- Provided thorough explanations and calculations if a student required help, and would support them until they completely understood a question.
- Ryan always had a positive attitude and was always prepared to offer his guidance and help if you asked for it during practicals.
- Ryan is very approachable and a kind person, which helps in being taught by him as he made me feel comfortable as a student to ask questions/investigate etc. He was attentive when I needed help, and always spent the time with me to explain concepts and questions I needed more clarification on.
- Ryan was very knowledgeable of coding and also understood the questions well. He was a useful asset to my learning as he tried to involve every student and checked to see if we knew how to answer the questions.
- Super helpful explaining the content
- their willingness to help me answer any questions!
- They encouraged group learning and always took the time to explain concepts to everyone individually, which was really helpful.
- This tutor approached things at a pace which I could understand. He did not rush through his explanations at all and ensured he was checking I understood throughout. This felt more personalised which I really appreciated.

- This tutor came around and helped out and explained the math terms.
- Very direct with information, communicated clearly and with high levels of detail
- Very experienced with the course and knew the content.
- Very good at explaining things clearly, and made sure you understood it before leaving you to do it yourself
- Very good explanations, willing to stay back after class to help me understand concepts I had trouble with, very patient, approachable, friendly
- Very good explanations of concepts I was struggling with.
- Very good tutor, clear explanations and concise.
- Very helpful.
- Very helpful and eager to help. Friendly and welcoming.
- Very open, patient. When asked questions about information outside the scope of the course (i.e. using code that is not taught in SCIE1201) he explained why we could not use it but still why it was useful to know for later use.
- Was helpful in providing direction to questions that I had during my pracs and was able to adjust his teachings to make me understand better.
- Was very approachable and helped whenever I had questions. Was happy to sit and explain complicated concepts until I was sure I got them.
- Welcoming attitude with clear and easy to understand explanations of difficult concepts. Very simple and concise teaching without excess or unnecessary information.
- We love the diagrams ! visual learning is so slay !
- When asking for help, they not only showed what to do but also explained why they did it.

1.9) What would you have liked this tutor to have done differently?

- - nothing
- Explained more of the concepts to the whole class
- I can't think of anything that he could have done differently.
- I don't think there is anything that he could have done differently
- I don't think there is anything that should be changed or done differently
- I really can't think of other things. Maybe just stay as he is right now would be the best!!
- It would be helpful if some concepts were broken down in more detail within the provided materials. While it's valuable to refer back to what we've learned in lectures, re-explaining certain key points can greatly enhance our understanding and reinforce the learning process. Thank you!
- I would've enjoyed maybe involving the class in person on the whiteboards more to ensure everyone is engaged more often
- Maybe a little more wandering around the class would have been nice
- Maybe go through answers more as a class.
- Maybe have gone over things with the class / had prepared examples, but like seriously everything was good. :)
- More markers and window diagrams!
- nil
- nothing (2 Counts)
- Nothing
- Nothing much...
- Nothing really.
- Nothing really he was great
- perhaps more in-class explanations of how to solve maths problems.
- Showed working clearly on board more
- Somewhat quiet - when class was loud he would not try to get attention before speaking - though this did not directly affect me as I was paying attention.
- There is nothing that I can think of.
- Was a bit awkward, so it made it a bit harder for me to approach him or ask a question, but was very kind when I did ask a question.
- When assisting me on questions I have trouble with, I would like a bit more guidance by showing me how to work questions out, rather than asking me questions to see if I know the answer. An explanation of broader concepts that the questions requires would be beneficial before launching into it would be beneficial, rather than assuming I know certain concepts.
